

Multi-agent markets

Concept. The idea here is

Figure 10.1: State partition graph topology for multi-agent market archetypes.

- Full sim: full event-based spatial stochastic model

- Inference model: spatial mean field inference features using the probabilistic reweighting
 - Also use the likelihood-free inference model?
-
- Humanitarian aid logistics in response to flooding, fire or other natural disasters
 - Routing of transportation
 - Where to focus searches
 - Transportation size distribution
 - Supply chain logistics of resources and allocation of budget
 - Example paper here with stochastic network models [\[1\]](#)
